LANSpy

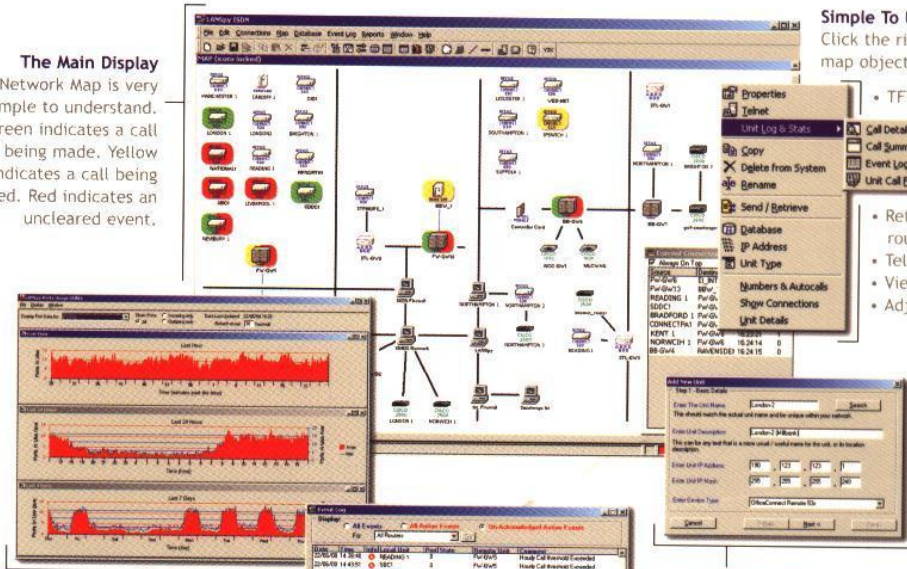

Enterprise Router Manager

The Main Display
The Network Map is very simple to understand. Green indicates a call being made. Yellow indicates a call being received. Red indicates an uncleared event.

Simple To Use
Click the right mouse button on a map object and manage the device

- TFTP new code updates
- Retrieve and view a routers configuration
- Telnet directly to the device
- View call logs
- Adjust thresholds

Know How Many ISDN Circuits Are In Use
Imagine the scenario. You have two Cisco 3640 routers. Each has a Primary Rate Interface Card (PRI). One PRI has 10 channels. The other has eight. That's a total of 18 ISDN channels/ports.

Real-Time Ports Monitoring
The ports monitoring feature of LANSpy provides a real-time view of all your ISDN channels. Use this feature to keep you informed. Calculate growth or reductions. Save money. Become proactive.

Event Log
The real-time event log keeps track of calls in or out, failed calls, all DASS2 and Q931 events, threshold breaks, call lengths etc.

LANSpy Wizard
To add a new router to the network map is fast and simple using the Add Router Wizard. Automatic router discovery makes this task a breeze.
